PULSEFORM

IMMERSIVE FITNESS WEBSITE
ART DIRECTION & ASSET PROMPT BIBLE

A production-minded blueprint for a bright, cinematic, 3D-led fitness brand experience. Built around original art direction, deliberate motion, coherent assets, and a functional commercial website.

MINERAL #F5F2EA	**PERSIMMON** #FF6747	**ELECTRIC PERIWINKLE** #8177FF
BOTANICAL #174D3B	**CARBON** #20231F	**CLOUD BLUE** #DDE8F8

Creative rule: do not generate a pile of unrelated “cool” images. Design one coherent visual world, create a small set of master assets, then derive the rest from those references. The 3D hero and scroll choreography must be prototyped in-browser before producing every asset.

Inspiration methodology: study the interaction principles used in high-craft immersive sites, not their branding or exact compositions. Reference themes include cinematic sports storytelling, oversized kinetic typography, scroll-driven 3D camera movement, and strong mobile fallbacks. This is inspiration, not a claim that this concept has won an award.

01 / Creative direction

Working concept: PULSEFORM. Positioning: a premium training studio that combines physical performance with an expressive, contemporary visual identity. The experience should feel bright, tactile, sculptural, and energetic, not like a dark bodybuilding template.

Art-direction rules

• **Bright-first:** mineral white is the default canvas. Botanical green is a contrast scene, not the whole website.

• **Signature color:** persimmon is used for calls to action and selected high-energy moments. Periwinkle gives the 3D world a digital, unexpected accent.

• **One visual universe:** same light direction, material language, lens feel, and color grade across generated assets.

• **Real geometry where interaction matters:** use a real-time 3D model for the signature object. Use video for cinematic human movement, not as a fake substitute for every interaction.

• **Typography is part of the art direction:** oversized editorial display type, compact labels, generous negative space. Keep all essential text as HTML, never bake text into generated images.

• **No generic AI collage:** avoid random gym stock imagery, inconsistent athletes, extra limbs, fake logos, garbled text, and impossible equipment.

Palette and use

Token	Hex	Use
Mineral	#F5F2EA	Primary background, spacious sections
Persimmon	#FF6747	Primary CTA, controlled energy accents
Electric Periwinkle	#8177FF	3D material accents and selected scene backgrounds
Botanical	#174D3B	Contrast scene, navigation details, premium grounding
Carbon	#20231F	Typography and icons
Cloud Blue	#DDE8F8	Secondary panels and transitions

Contrast rule: test text against the actual background. Never use small white text on persimmon or small persimmon text on mineral without checking contrast. Color transitions must not reduce readability.

02 / Experience map and scroll choreography

Scene	Timing / format	Direction
00 — Intro / loader	0–1.5s, skippable	Minimal wordmark assembly; progress indicator only if actual assets need loading. No long forced intro. Show the page immediately on slow devices.
01 — Hero / dimensional object	First viewport	Headline “BUILT TO MOVE YOU.” The real-time sculptural training object floats to the right. Pointer movement subtly changes camera/parallax; object rotates a few degrees. CTA stays obvious.
02 — Momentum film	Scroll 0–1 screen	A 6–8 second loop of close-up training movement; typography overlays in HTML. Cut on motion, no random gym montage.
03 — 3D signature sequence	Pinned 180–240vh	Camera moves around a custom weight-plate / dumbbell sculpture. Labels reveal three training principles. Scroll controls camera and object, not a prerecorded fake 3D spin.
04 — Training modes	Scroll cards	Four editorial cards: Strength, Conditioning, Mobility, Personal Coaching. Image/video motion is restrained; mobile taps reveal details.
05 — Class finder	Interactive module	Three practical questions: goal, experience, schedule. Rules-based recommendation with an editable class mapping.
06 — Membership	Decision section	Two or three clearly priced plans, honest benefits, monthly/annual switch only if the business offers both. No deceptive urgency.

Scene	Timing / format	Direction
07 — Coaches/community	Warm human section	Real client photography where available. Demo imagery is labelled as concept material; never fabricate testimonials or results.
08 — Timetable/booking	Functional conversion	Filter by day/type/coach; booking integration or clearly scoped enquiry form; real success/error states.
09 — Final CTA	Closing scene	Abstract architectural portal made from the same 3D materials. Strong CTA, location, contact and opening hours.

03 / Master visual bible

Paste this style block at the end of every image/video prompt. The prompts below deliberately reuse the same object, studio, palette, lighting and camera language to avoid the disconnected look of random AI-generated assets.

```
MASTER STYLE BLOCK
Premium contemporary sports-campaign art direction; bright mineral-white cyclorama and architectural training studio, palette restricted to mineral #F5F2EA, persimmon #FF6747, electric periwinkle #8177FF, botanical #174D3B, carbon #20231F and cloud blue #DDE8F8. Directional softbox lighting from upper left, realistic contact shadows, physically plausible reflections, subtle film grain, crisp editorial composition, tactile powder-coated metal and translucent resin materials, premium commercial photography, restrained depth of field, natural anatomy and believable equipment proportions. Modern European design-studio sensibility, precise negative space, no visual clutter. No text, no logos, no watermarks, no brand names, no UI, no fake lettering, no duplicated limbs, no malformed hands, no impossible joints, no floating equipment unless explicitly requested.
```

Consistency workflow

• Create the hero still first and approve its framing, palette, material, and lighting before animating it.

• Use the approved hero still as a visual reference for every related asset. Where the tool supports reference images, attach the same approved reference.

• Generate 2–4 candidates per critical asset, then select for consistency rather than novelty alone.

• Do not ask video generation to render readable typography, logos, pricing, or interface elements. Add those in the website.

• For looping video, match first and last frames as closely as possible. If the model cannot produce a clean loop, use a short crossfade or choose a different take.

• AI-generated people are concept imagery only until replaced with approved client photography or clearly licensed footage.

04 / Image asset prompts

I01 — Desktop hero keyframe | 16:9, 3840×2160 preferred; generate a 1920×1080 fallback

```
A single premium sculptural training object: a compact dumbbell formed from two softly chamfered powder-coated metal weight heads and a precise central grip, one head persimmon orange and the other electric periwinkle, with subtle engraved geometric grooves but absolutely no letters or logos. The object is suspended just above a mineral-white studio plinth on the RIGHT 45% of frame, three-quarter view, believable weight and proportions, crisp contact-shadow cue below, broad softbox reflection across the curved surfaces. Background is an architectural white cyclorama with a faint cloud-blue light gradient and a narrow persimmon bounce on the far edge. LEFT 45% must remain clean, quiet negative space for a large HTML headline. Camera at object height, 70mm product-photography look, premium material realism, clean silhouettes, no extra equipment. MASTER STYLE BLOCK.
```

I02 — Mobile hero keyframe | 9:16, 2160×3840 preferred; safe crop for 1080×1920

```
Vertical adaptation of the approved I01 hero scene, preserving exactly the same dumbbell design, colors, materials, lighting direction and studio. Place the object in the upper-middle third, large enough to read on a phone but leave the lower 30% and upper 12% uncluttered for HTML navigation and headline/CTA layout. Strong sculptural silhouette, slight three-quarter angle, generous breathing room, mineral-white background with subtle cloud-blue gradient. No text or interface. MASTER STYLE BLOCK.
```

I03 — 3D object reference / turntable still | 1:1, 2048×2048

```
Orthographic-style studio reference of the exact same persimmon-and-periwinkle sculptural dumbbell from I01, centered, full object visible with margin on all sides, three-quarter view, neutral mineral background, soft contact shadow, realistic powder-coated metal, accurate symmetrical geometry, consistent scale and clean edges. This image is a modeling and material reference, not a finished website screenshot. No text, no props. MASTER STYLE BLOCK.
```

I04 — Training mode: Strength | 4:5, 2000×2500

```
Editorial sports photograph of an athlete preparing for a controlled deadlift in a bright modern training studio. Crop from shoulders to mid-shin so the bar, hands, plates, posture and equipment are clearly readable; face may be naturally out of frame, but anatomy and grip must be correct. Mineral-white surroundings, a persimmon plate detail and botanical-green accent far in the background. Strong side light, natural skin texture, grounded feet, real equipment proportions, candid concentration rather than exaggerated aggression. Leave a small quiet band at the top for website overlay. MASTER STYLE BLOCK.
```

I05 — Training mode: Conditioning | 4:5, 2000×2500

```
Premium editorial photograph of an athlete performing a controlled battle-rope wave in a bright functional training studio. Low camera angle, rope curves create a clear directional rhythm through the frame, believable rope weight and hand grip, face not the focal point. Mineral-white floor, electric-periwinkle wall panel and a small persimmon accent. Freeze the rope motion sharply enough to read the form, with a little natural motion in the rope ends. No smoke, no neon nightclub lighting. MASTER STYLE BLOCK.
```

I06 — Training mode: Mobility | 4:5, 2000×2500

```
Editorial photograph of an athlete performing a deep lunge mobility drill on a muted cloud-blue mat in a sunlit minimalist studio. Accurate joint alignment, natural body proportions, calm focused movement, soft window-like directional light and a botanical-green architectural detail in the background. Airy composition, tactile floor, restrained palette, premium wellness-sport campaign rather than spa stock photography. MASTER STYLE BLOCK.
```

I07 — Personal coaching | 4:5, 2000×2500

```
Documentary-style premium sports photograph of a coach guiding an adult athlete through a setup cue beside a rack, both fully clothed in simple unbranded training apparel. Show respectful coaching interaction and realistic posture; do not depict medical treatment or guaranteed transformation. Bright mineral studio, soft botanical-green shadow area, small persimmon equipment detail, authentic expression and candid body language. Keep the people visually plausible and not overly retouched. MASTER STYLE BLOCK.
```

I08 — Coach portrait placeholder | 3:4, 1800×2400

```
Premium editorial portrait of a fictional fitness coach standing in a bright training studio, relaxed confident posture, plain unbranded technical apparel in botanical green, natural skin texture, honest lighting and an approachable expression. Frame from waist up with enough space around the head for flexible cropping. This is a concept placeholder and must not be represented as a real client's staff
```

member. Mineral-white backdrop, subtle persimmon bounce. MASTER STYLE BLOCK.

I09 — Material macro: plate edge | 1:1, 2048×2048

Extreme macro product photograph of the curved edge of a powder-coated persimmon training weight plate, fine tactile coating visible, precise bevel and tiny realistic manufacturing details, periwinkle object softly reflected in the out-of-focus background. Controlled softbox highlight, mineral-white studio, rich but accurate color, abstract enough to work as a texture panel while still clearly physical. No text or branding. MASTER STYLE BLOCK.

I10 — Community / studio wide | 16:9, 2560×1440

Wide editorial photograph of a welcoming contemporary fitness studio during a small-group training session, several adults using equipment safely with clear space between stations, bright daylight, mineral-white architecture, botanical-green details and restrained persimmon/periwinkle equipment accents. Human movement feels candid and diverse without looking staged; no one looks directly at camera. Avoid impossible equipment, overcrowding, fake signage, or hyper-muscular caricatures. Leave a clean upper-left area for a short HTML statement. MASTER STYLE BLOCK.

I11 — Closing portal still | 16:9, 2560×1440

A sculptural architectural portal made from two oversized curved powder-coated forms, one persimmon and one electric periwinkle, standing in a bright mineral-white studio like a doorway into a training space. Strong perspective and elegant cast shadows, a subtle botanical-green interior plane, camera centered low and looking through the portal into clean bright space. The left and center retain calm negative space for a final HTML call to action. Physical materials, precise geometry, gallery-installation quality, no people, no text. MASTER STYLE BLOCK.

I12 — Social share image base | 1.91:1, 2400×1260; crop to 1200×630

A wide art-directed composition using the approved sculptural dumbbell from I01 on the right, mineral-white background, controlled persimmon and periwinkle light accents, subtle realistic floor shadow, generous blank area on the left for a designer to add the PULSEFORM wordmark and headline later. No text generated in the image, no logo, no watermark. MASTER STYLE BLOCK.

05 / Video prompts and shot list

Durations below are target deliverables. If your video model only supports certain clip lengths or aspect ratios, generate the nearest supported length and trim in an editor. Use 24 fps for a cinematic feel unless a different frame rate is needed. Silent website loops are preferred; add sound only behind an explicit user-controlled toggle.

V01 — Desktop hero atmospheric loop | 16:9 | 8 seconds | 24 fps | silent | seamless-loop target

```
Use I01 as the exact visual reference. The same persimmon-and-periwinkle sculptural dumbbell hovers a few centimeters above the mineral-white plinth. Over eight seconds it makes a very slow 12-degree yaw rotation and a barely perceptible vertical drift; a broad softbox reflection travels gently across the powder-coated surface while the camera makes a subtle 3% push-in. Keep the object on the right half and preserve the left-side negative space throughout. Locked studio environment, no cuts, no sudden camera movement, no object redesign, no shape warping. End with the object and camera nearly matching the opening frame for a clean loop. MASTER STYLE BLOCK.
```

V02 — Mobile hero loop | 9:16 | 6 seconds | 24 fps | silent | loop-friendly

```
Vertical version of the approved V01 scene, same object and exact materials. Object stays in the upper-middle third with open space above and below for responsive HTML content. Slow controlled tilt and a soft reflection sweep only; no fast orbit, no dramatic zoom, no sudden color changes. Preserve clean silhouette and stable proportions. End close to the starting composition. MASTER STYLE BLOCK.
```

V03 — Momentum training film | 16:9 | 8 seconds | 24 fps | silent

```
A single coherent premium sports-campaign shot, not a montage: close side tracking shot of an adult athlete's hands chalking and securely gripping a barbell in a bright mineral-white training studio. Natural hand anatomy, accurate grip and bar geometry, a small visible cloud of chalk drifting through a shaft of soft daylight, persimmon plate detail in the near background. Camera tracks slowly 20–30 cm along the bar, then settles; controlled movement, authentic texture, no slow-motion distortion, no face morphing, no cuts. Leave no generated text. MASTER STYLE BLOCK.
```

V04 — Scroll-sequence source clip (camera move) | 16:9 | 8 seconds | 24 fps | silent; use as reference only if making a 3D sequence

```
A product-film camera move around the exact sculptural dumbbell from I03 on a mineral-white stage. Begin front three-quarter view, orbit smoothly to the side, reveal the handle and the opposite weight head, then settle into a slightly elevated three-quarter view. Object remains rigid and geometrically consistent; no morphing, no melting, no extra parts. Lighting remains fixed, shadows remain physically grounded. The clip is a reference for a separate real-time Three.js camera path, not the final scroll interaction. MASTER STYLE BLOCK.
```

V05 — Conditioning loop | 9:16 | 6 seconds | 24 fps | silent | loop-friendly

```
Vertical tight crop of an adult athlete performing one controlled battle-rope wave in a bright studio. Rope moves in one readable rhythmic wave across the lower two-thirds; hands maintain a plausible grip, shoulders and torso move naturally, camera is low and mostly locked. Periwinkle background plane and small persimmon equipment detail. No jump cuts, no excessive sweat effects, no camera shake. End in a pose that can crossfade smoothly to the start. MASTER STYLE BLOCK.
```

V06 — Strength detail loop | 9:16 | 6 seconds | 24 fps | silent | loop-friendly

```
Vertical close-up of a barbell plate being carefully loaded onto a grounded bar by an adult athlete in a bright mineral-white training studio. Show correct equipment contact, plausible hand position, powder-coated persimmon plate with no logo, crisp material details. Camera pushes in slowly by a few centimeters and stops. Avoid any impossible floating weights or unsafe lifting behavior. No text. MASTER STYLE BLOCK.
```

V07 — Mobility loop | 9:16 | 6 seconds | 24 fps | silent | loop-friendly

```
Vertical editorial video of an adult athlete flowing slowly from a half-kneeling hip-flexor stretch into a controlled upright lunge in a bright sunlit studio. Accurate anatomy and stable balance, cloud-blue mat, botanical-green background accent. Gentle lateral camera drift, calm breathing motion, no sudden changes, no elastic limbs. Keep framing stable and the movement repeatable for a crossfade loop. MASTER STYLE BLOCK.
```

V08 — Color/material transition | 16:9 | 4 seconds | 24 fps | silent

```
Macro studio shot of a translucent persimmon resin ribbon sweeping across a matte mineral-white surface, revealing an electric-periwinkle reflection beneath it. The material moves as a physical ribbon, not liquid paint; elegant controlled curvature, realistic refraction and contact shadow, camera fixed, one
```

```
continuous motion. Keep contrast moderate and composition abstract so it can be used as a short transition overlay. No text, no particles, no magical sparks. MASTER STYLE BLOCK.
```

V09 — Final portal camera push | 16:9 | 6 seconds | 24 fps | silent

```
Use I11 as the exact reference. A slow, stabilized camera push travels through the sculptural persimmon-and-periwinkle architectural portal into a bright mineral-white studio beyond. Cast shadows shift naturally with the camera, materials stay rigid, no geometry bending, no sudden exposure changes. The final frame leaves generous clean space for the HTML call to action. Premium architectural film, no people, no text. MASTER STYLE BLOCK.
```

V10 — Studio atmosphere wide | 16:9 | 8 seconds | 24 fps | silent

```
Wide, steady lateral dolly through the same bright contemporary fitness studio as I10. In the middle distance, a small group performs controlled exercises at separate stations; the camera moves slowly and never cuts. Mineral-white architecture, botanical-green details and restrained persimmon/periwinkle equipment accents. Natural movement, realistic spacing, no one looks into camera, no visible brand logos or readable signs. Keep the motion subtle enough for a website background. MASTER STYLE BLOCK.
```

06 / Real-time 3D asset brief

For the signature sequence, do not depend on a generated video to behave like an interactive 3D object. Create or commission a real model, export GLB/glTF, and drive the camera/object from scroll progress.

Model specification

• Model: one sculptural dumbbell with two chamfered weight heads and a central grip; maintain exact silhouette from approved I03.

• Materials: physically based powder-coated metal, restrained roughness variation, subtle clearcoat only where plausible; no mirror-chrome toy look.

• Geometry: clean bevels, no non-manifold surfaces, sensible polygon count, baked details where appropriate.

• Deliverable: GLB/glTF, optimized textures, compressed geometry if supported, target under 2–3 MB for the main model where practical.

• Lighting: environment map plus a small number of controlled lights; test on mobile GPUs.

• Interaction: pointer affects camera/orientation by a few degrees; scroll drives a camera rig and object rotation; no uncontrolled spinning.

• Fallback: hero poster/video and static scroll scenes when WebGL is unavailable, disabled, or reduced-motion is requested.

3D model-generation prompt

```
Create a production-ready 3D asset for a premium fitness brand website: a compact sculptural dumbbell with two symmetrical softly chamfered weight heads, a straight central grip with physically plausible thickness, clean manufactured geometry, no text, no logo, no branding. Left head powder-coated persimmon orange (#FF6747), right head electric periwinkle (#8177FF), grip carbon (#20231F) with subtle tactile grip texture. Premium industrial design, realistic proportions, clean topology, consistent bevel width, no floating components, no impossible holes, no decorative elements that interfere with grip. Model centered at origin, sensible scale and pivot, clean UVs, PBR materials, exportable as GLB/glTF. Deliver a neutral studio render from front, side, and three-quarter views for review. The render is a reference; final website interaction must use actual geometry.
```

07 / Interaction implementation brief

• **Scroll sequence:** pin one scene for a defined scroll range, map normalized scroll progress to camera position, target, and object rotation. Keep the scroll timeline deterministic and reversible.

• **3D-to-editorial transition:** as the model moves toward the edge of the viewport, let the DOM layout take over with a matching still/shape; avoid a jarring canvas cut.

• **Typography:** animate masks and line positions, not every letter at once. Keep all copy selectable and accessible.

• **Pointer effects:** limit to small movement; disable on coarse pointers and touch devices.

• **Class cards:** use poster images first; load/play short muted loops only when the card is in view or interacted with.

• **Navigation:** no forced scroll-jacking. Native scroll remains in control; scroll-linked scenes should be skippable and not trap the user.

• **Reduced motion:** use static object poses, remove parallax and long pin sequences, keep all content and calls to action available.

• **React cleanup:** scope and revert GSAP timelines/triggers on component unmount; avoid duplicate triggers after route changes.

08 / Asset manifest

ID	Asset	Ratio	Length / format	Priority
I01	Desktop hero still	16:9	3840×2160	P0
I02	Mobile hero still	9:16	2160×3840	P0
I03	3D object reference	1:1	2048×2048	P0
V01	Desktop hero loop	16:9	8s	P0
V02	Mobile hero loop	9:16	6s	P1
V03	Momentum film	16:9	8s	P1
V04	Camera move reference	16:9	8s	P0
I04–I07	Four training-mode images	4:5	2000×2500 each	P1
V05–V07	Training card loops	9:16	6s each	P2
I08	Coach placeholder	3:4	1800×2400	P2
I09	Material macro	1:1	2048×2048	P2
I10	Studio wide	16:9	2560×1440	P1
V10	Studio atmosphere loop	16:9	8s	P2
V08	Material transition	16:9	4s	P2
I11	Closing portal still	16:9	2560×1440	P1
V09	Closing portal video	16:9	6s	P2
I12	Social share base	1.91:1	2400×1260	P3
GLB01	Interactive dumbbell	3D	GLB, target 2–3MB	P0

09 / Production workflow: do not generate randomly

Gate 1 — Hero still

Generate I01 and I02. Approve silhouette, palette, lighting, negative space and crop before video generation.

Gate 2 — 3D proof

Model a simple version of GLB01 and place it in the browser. Verify pointer response, lighting, camera framing and mobile fallback.

Gate 3 — Scroll proof

Build one pinned scroll scene with the real 3D object and typography. Test it with a mouse, touch, keyboard, reduced motion, and slow device.

Gate 4 — Motion assets

Generate V01, V03 and V04 first. Review continuity and object consistency. Only then produce card loops and transition footage.

Gate 5 — Supporting imagery

Generate I04–I12 with the approved visual reference attached. Reject images that drift in palette or realism.

Gate 6 — Functional site

Build classes, membership, booking, and contact modules. Use real client data or clearly labelled demo content.

Gate 7 — Optimize

Compress video, create posters, lazy-load noncritical media, pause offscreen rendering, and test on a mid-range Android phone.

10 / Negative prompt and quality-control checklist

```
Avoid: random mixed art styles; dark black-and-red gym clichés; generic neon cyberpunk; oversaturated gradients everywhere; fake text or logos; watermarks; malformed hands; duplicated fingers; impossible joints; distorted faces; inconsistent clothing; changing dumbbell geometry between frames; rubbery metal; floating shadows; excessive lens flare; smoke clouds; sparks; particle storms; excessive motion blur; fisheye distortion; chaotic camera moves; plastic skin; over-sharpening; fake before/after transformations; fake testimonials; unreadable interface text; cluttered compositions; visual elements that compete with the headline.
```

• Does every asset share the same color grade, lighting direction and material language?

• Does the hero leave enough real negative space for HTML copy?

• Is the object geometry consistent between stills and video?

• Does the mobile crop have its own composition rather than a poor desktop crop?

• Can the website communicate the same message with animation disabled?

• Are all booking, price, timetable, and testimonial claims genuine and verifiable?

• Have we checked the commercial-use terms for each generation tool and licensed any third-party media?

• Are we using generated people only as concept placeholders unless approved and accurately disclosed?

11 / Engineering and performance acceptance

• Aim for Core Web Vitals targets: LCP ≤ 2.5 s, INP ≤ 200 ms, CLS ≤ 0.1 under appropriate measurement conditions. These are targets, not pre-verified outcomes.

• Use a poster and static fallback; do not block page content on a cinematic loader.

• Only load the main 3D scene when needed; pause or reduce rendering offscreen.

• Serve appropriately sized WebP/AVIF images and compressed WebM/MP4 video. Provide mobile-specific media only where the visual difference justifies it.

• Respect prefers-reduced-motion, keyboard access, focus visibility, contrast and meaningful alternative text.

• Do not sacrifice usable booking flows to preserve an animation. If a sequence makes navigation confusing, simplify it.

• Check hosting, third-party booking fees, image/video-generation licensing, and maintenance scope before quoting the client.

12 / Reference research and implementation links

Use references to study techniques and craft, not to copy a site's identity or exact composition. Award status can change; verify each site's current status directly before describing it to a client.

Final principle: the asset prompts are a controlled production system, not a promise that one generation will be perfect. Generate the hero first, establish the reference, prototype real 3D interaction, then scale the same art direction across the site. The premium result comes from selection, iteration, implementation and restraint.
